

corruptdb.txt

So you've got a corrupt database!

=====

1. Restore from backups.

OK, so they are corrupt too!

2. DTS the DB out to a fresh DB.

Amazingly, this has worked for me in the past.

Takes ages though.

3. Goto [www.sqlserverportal.com](http://www.sqlserverportal.com) > backup > MSSQLrecovery.

This tool might save your bacon.
